PROFILE SUMMARY

Self-taught **MERN Stack Developer** with hands-on experience building **dynamic, scalable web applications** using **React.js, Node.js, and MongoDB**. Proficient in building **RESTful APIs**, integrating third party services such as Razorpay and Firebase Auth, and deploying full stack apps on Vercel and AWS. Follows **Clean Architecture principles** to ensure scalable, testable, and maintainable codebases. Strong problem solving skills are demonstrated by solving 100+ LeetCode problems, with a passion for writing clean, optimized, and maintainable code.

SKILLS

Languages: JavaScript, TypeScript, C

Data Structures and Algorithms: Arrays, Linked Lists, Stacks, Queues, Hash Tables, Trees, Graphs (Solved 100+ Leetcode problems)

Web Development: HTML, CSS, React.js, Redux, Tailwind CSS, Bootstrap

Backend: Node.js, Express.js, REST APIs, JWT, OAuth 2.0, Razorpay integration

Databases: MongoDB, PostgreSQL, Firebase, Firestore

Tools & Version Control: Git, GitHub, Postman, Figma, npm

Deployment: Vercel, Cloudinary, AWS

Other: MVC, Repository Architecture, Clean Architecture, OOP, Authentication, Authorization, CRUD, Responsive Design

PROJECTS

Workora – Freelance Marketplace Platform (Ongoing)

[GitHub](#)

A full stack freelance marketplace platform where clients can post projects and hire freelancers based on skills, budget, and ratings. Freelancers can apply for jobs, manage bids, track progress, and receive payments securely through an integrated wallet system.

Key Features:

- **Role-Based Authentication:** Secure login and access control for Admin, Client, and Freelancer roles with JWT and OTP verification.
- **Job Posting & Bidding System:** Clients can post jobs with deadlines and budgets; freelancers can submit proposals and track their status.
- **Wallet-Based Payment Flow:** Clients and freelancers have individual wallets. Clients can add funds, and upon project completion, release payments directly to freelancers.
- **Real-Time Chat Notifications:** Instant communication and updates between clients and freelancers using WebSocket-based chat.
- **Admin Dashboard:** Manage users, subscriptions, payments, and monitor project activities with analytics and reports.
- (Currently in development phase – focusing on authentication, wallet integration, and admin foundation.)

RexPex – Smart Eyewear E-commerce Platform

[GitHub](#)

A full stack web application that helps users find and purchase eyeglasses based on style, budget, and needs. Features an advanced filtering system and a unique “Smart Repair System” that notifies the nearest service partner for free repairs.

Key Features:

- **Advanced Filtering System:** Multi criteria search by category, brand, price, and stock status using optimized backend queries.
- **Smart Offers Engine:** Personalized product suggestions based on user behavior and filters like category, brand, price, and stock status.
- **Performance Optimization:** Integrated pagination, indexed MongoDB queries, and fast search for a smooth user experience.

ADDITIONAL PROJECTS

User Management System & Admin Dashboard App

[GitHub](#)

A modern admin dashboard for managing users, built with React and TypeScript. Features include user listing, editing, deletion, and profile control, all within an interactive UI.

Key Contributions:

- Developed the frontend using React with TypeScript for strong type safety and maintainability.
- Followed Clean Architecture principles to organize code into clear, scalable layers.
- Used Redux for global state management and asynchronous operations.
- Designed a responsive UI using Tailwind CSS with smooth animations powered by Framer Motion.
- Modular components implemented with reusable form handling and validation.
- Added features like dynamic search, animation-adjusted modals, and intuitive UI interactions.

OLX Clone — Buy & Sell Web App

[GitHub](#)

A responsive OLX like platform built with React and Firebase, allowing users to post, browse, and manage product listings.

Key Contributions:

- Integrated Firebase Auth with Google login and managed sessions via the React Context API.
- Enabled image uploads and storage using Firebase Storage.
- Designed UI with Tailwind CSS and handled navigation using React Router.
- Implemented search, filtering, and lazy loading for performance optimization.

Netflix Clone Streaming Web App

[GitHub](#)

A responsive Netflix-like platform built with React and Firebase, offering user authentication, dynamic content browsing, and optimized component rendering.

Key Contributions:

- Integrated Firebase Authentication with secure session management.
- Managed global state using React Context API for cleaner data flow.
- Improved performance using `React.memo` and component-level optimization.
- Designed a responsive and dynamic user interface using Tailwind CSS.
- Implemented protected routes, watchlist features, and dynamic content loading.
