PROFILE SUMMARY

Self-taught **MERN Stack Developer** with hands-on experience building scalable full-stack web applications using React.js, Node.js, Express.js, MongoDB, and JavaScript. Skilled in developing RESTful APIs, implementing authentication and authorization, integrating third-party services such as Razorpay, Stripe, and Firebase Authentication, and deploying applications on AWS and Vercel. Strong understanding of Clean Architecture, database design, API optimization, and scalable application development. Demonstrated strong problem-solving skills through solving **100+ LeetCode problems**, with a passion for writing clean, efficient, and maintainable code following industry best practices.

SKILLS

Programming Languages: JavaScript, TypeScript

Data Structures & Algorithms: Arrays, Linked Lists, Stacks, Queues, Hash Tables, Trees, Graphs, Problem Solving (Solved 100+ LeetCode Problems)

Frontend Development: HTML5, CSS3, React.js, Redux, Tailwind CSS, Bootstrap, Responsive Web Design

Backend Development: Node.js, Express.js, RESTful APIs, JWT Authentication, OAuth 2.0, Razorpay Integration, Stripe Integration

Databases: MongoDB, PostgreSQL, Firebase, Firestore

Tools & Technologies: Git, GitHub, Postman, Figma, npm, Cloudinary

Deployment & Cloud: Vercel, AWS

Software Engineering Concepts: MVC Architecture, Repository Pattern, Clean Architecture, Object-Oriented Programming (OOP), Authentication, Authorization, CRUD Operations, API Integration

PROJECTS

Workora – Freelance Marketplace Platform

[GitHub](#) | [Live](#)

A full-stack freelance marketplace platform where clients can post projects and hire freelancers based on skills, budgets, and ratings. Freelancers can apply for jobs, manage proposals, track project progress, and receive secure payments through an escrow-based wallet system.

Key Features:

- **Role-Based Authentication:** Secure authentication and authorization system for Admin, Client, and Freelancer roles using JWT, OTP verification, and protected routes.
- **Job Posting & Proposal System:** Clients can create projects with budgets and deadlines, while freelancers can submit proposals, track application status, and manage ongoing projects.
- **Escrow-Based Payment System:** Built an escrow-based payment workflow for secure client-to-freelancer transactions.
- **Real-Time Chat & Notifications:** Built instant messaging and notification features using WebSocket-based real-time communication between clients and freelancers.
- **Admin Dashboard:** Developed an admin panel to manage users, projects, subscriptions, payments, reports, and platform activities with analytics support.
- **Full-Stack Deployment:** Deployed the application using AWS and Vercel with optimized API handling, secure authentication flow, and cloud-based media storage integration.

RexPex – Smart Eyewear E-commerce Platform

[GitHub](#)

A full-stack e-commerce web application built using **Node.js, Express.js, MongoDB, EJS, JavaScript, HTML, and CSS** that helps users discover and purchase eyewear products based on style, budget, and preferences. Developed a unique Smart Repair System that connects users with nearby service partners for free repair support.

Key Features:

- **Advanced Filtering & Search System:** Implemented multi-criteria product filtering based on category, brand, price range, and stock availability using optimized backend queries.
- **Smart Recommendation Engine:** Developed personalized product recommendations based on user behavior, search patterns, and product preferences.
- **Authentication & User Management:** Built secure user authentication and authorization workflows with session handling and protected routes.
- **Performance Optimization:** Improved application performance using MongoDB indexing, server-side pagination, and optimized database queries for faster product search and loading.
- **Responsive E-commerce Interface:** Designed a responsive and user-friendly UI using EJS templating, HTML, CSS, and Bootstrap for seamless cross-device experience.

ADDITIONAL PROJECTS

User Management System & Admin Dashboard

[GitHub](#)

Built a scalable admin dashboard using **React.js, TypeScript, Redux, and Tailwind CSS** for user management and profile control.

- Developed reusable and modular frontend components using React and TypeScript.
- Implemented global state management and asynchronous operations using Redux.
- Designed responsive UI with Tailwind CSS and animations using Framer Motion.
- Applied Clean Architecture principles for scalable and maintainable code structure.

OLX Clone – Buy & Sell Platform

[GitHub](#)

Developed a responsive marketplace application using **React.js, Firebase, and Tailwind CSS** for posting and managing product listings.

- Integrated Firebase Authentication with Google Sign-In and session management.
- Implemented product search, filtering, image upload, and lazy loading features.
- Built responsive user interfaces using Tailwind CSS and React Router.

Netflix Clone – Streaming Web Application

[GitHub](#)

Built a Netflix-inspired streaming platform using **React.js, Firebase, and Tailwind CSS** with secure authentication and dynamic content rendering.

- Implemented Firebase Authentication and protected routing.
- Optimized rendering performance using `React.memo` and reusable components.
- Developed responsive UI and dynamic watchlist functionality.

EDUCATION

Brototype Bootcamp, MERN Stack Development

Aug 2024 – Present

GHSS Palayad, Higher Secondary Education in Computer Commerce

Jun 2022 – Mar 2024
